Industry Update: Singapore Technical Reference TR 121 : 2024 Specification for Interior Floor Coating - launched in October 2024

This Technical Reference (TR) primarily focuses on conventional epoxy, acrylic, and polyurethane floor coatings that are **water-borne or solvent-free**. Limited reference is made to other specialised floor coatings. **Solvent-based coatings are excluded due to their significant contribution to volatile organic compounds (VOCs) and emissions**. Cement-based screeds used in many flooring systems are also outside the scope of this TR. This standard does not comprehensively cover the vast and evolving range of floor coating systems.
